

For companies that effectively want an outstanding commercial position in decades to come; they must be prepared to face two important challenges:

-

increase the efficiency of their operations, and

-

follow the statutes of environmental preservation.

Without an agreeable combination between industry and environment, there will not be sustainable development. It is universally known, industries are constantly searching to reduce operational costs and/or increase the product quality. Therefore, these industries depend on technologies that are constantly excelling.

[AdvantEnergy](#) is in tune with this strategic vision. Developed through more than a decade of intense scientific research, it firmly supported in tests which confirmed its technical qualities, environmental and energy advantages. Our [product](#) has an important role in the creation of a future which the highest technological advantages does not mean compromising the quality of life - or threatening the environment.

Our company, is advancing rapidly into new markets such as: China, Chile, Peru, Colombia, The Dominican Republic, The United States, Brazil, etc., where it expects a gradual but solid growth - compatible with the economic growth of each country.

I thank you for your attention. If your company is searching for a true product that delivers better energetic and environmental standards, I hope that we may become commercial partners.
